Common Problems Encountered with Atwood Mobile Furnaces

Many issues with Atwood furnaces are common across models and can often be diagnosed with basic checks. Below are some frequently reported problems:

- Furnace won't ignite
- Furnace runs but produces no heat
- Furnace cycles on and off frequently
- Unusual noises during operation
- Error codes or blinking lights on digital models
- Furnace shuts down unexpectedly

Each problem has specific causes and solutions, which will be explored in depth.

Troubleshooting Steps for Atwood Mobile Furnace Issues

- Diagnosing Ignition Problems

Problem: The furnace attempts to ignite but fails to light or starts and then shuts down.

Potential Causes:

- Faulty igniter or electrode
- Gas supply issues
- Ignition control module malfunction
- Dirty or clogged burners
- Low propane pressure

Troubleshooting Steps:

a. Check the Propane Supply:

Ensure the propane tank is full and valves are open. If the tank is empty, refill it. For systems with regulators, verify that the regulator is functioning correctly and that pressure is adequate.

b. Inspect the Igniter and Electrode:

Look for signs of damage, corrosion, or carbon build-up. Clean the igniter tip with a soft brush or cloth. Replace if cracked or worn.

c. Verify the Ignition System Operation:

Turn on the furnace and observe the ignition process. You should see a spark when the system attempts to ignite. If no spark occurs, test the igniter's wiring and connections.

d. Check the Gas Valve:

Ensure the gas valve opens when the furnace calls for heat. Use a multimeter to test electrical continuity. If faulty, replace the valve.

e. Assess the Burner:

Remove and clean the burner assembly, removing any dust, spider webs, or debris that could block gas flow.

f. Inspect the Control Module:

Some models have a circuit board that controls ignition. Look for signs of burn marks or damage. If malfunctioning, professional replacement may be necessary.
