Overview of the Mitsubishi 4G15 Engine

Before diving into the specific parts, it's important to understand what the 4G15 engine entails. The 4G15 is a 1.5-liter, four-cylinder, SOHC (Single Overhead Camshaft) engine produced by Mitsubishi. Known for its simplicity and efficiency, it was commonly installed in various Mitsubishi Lancer models from the late 1980s through the early 2000s. Its straightforward design makes it accessible for repairs and parts replacement, a feature appreciated by owners and technicians alike.

This engine operates with a cast-iron block, aluminum cylinder head, and a single overhead camshaft that drives the valves directly via rocker arms. It features multi-point fuel injection in later models, contributing to better fuel efficiency and lower emissions.

Major Engine Parts of the Mitsubishi Lancer 4G15

The 4G15 engine comprises numerous components working harmoniously to deliver power. These parts can be broadly categorized into the engine block, cylinder head components, fuel system, ignition system, cooling system, lubrication system, and ancillary parts.

- Engine Block and Internal Components

a. Engine Block

The foundation of the engine, the block is made of cast iron for durability and heat resistance. It houses the cylinders, pistons, crankshaft, and other internal parts. The design ensures the proper alignment and support for the moving parts.

b. Pistons

Pistons are cylindrical components that move up and down within the cylinders, converting the combustion energy into mechanical motion. The 4G15 pistons are made from aluminum alloy to reduce weight and improve heat dissipation.

Key features:

- Piston rings (compression and oil rings): Seal the combustion chamber, control oil consumption, and transfer heat to the cylinder walls.
- Piston pins: Connect pistons to connecting rods.

c. Connecting Rods

These rods connect the pistons to the crankshaft, transmitting the force generated during combustion. Made from forged steel or cast iron, they must withstand high stress.

d. Crankshaft

The crankshaft converts the reciprocating motion of pistons into rotational motion. It is balanced to minimize vibrations and is equipped with counterweights for smooth operation.

e. Cylinder Liners (if present)

While the 4G15 typically uses a cast-iron block without replaceable liners, some variants might incorporate liners for easy maintenance.

- Cylinder Head Components

a. Cylinder Head

Mounted atop the engine block, it contains the combustion chambers, valves, and camshaft. The head is made from aluminum to facilitate heat dissipation.

b. Valves (Intake and Exhaust)

The 4G15 engine features four valves per cylinder—two intake and two exhaust valves—controlled by a single overhead camshaft. Valves open and close to allow air-fuel mixture intake and exhaust gases out.

Components include:

- Valve springs: Maintain valve closure.
- Valve retainers and keepers: Secure the springs.
